

Promoting an International Security Architecture for Cyberspace: Pre-normative Approaches to Building Consensus

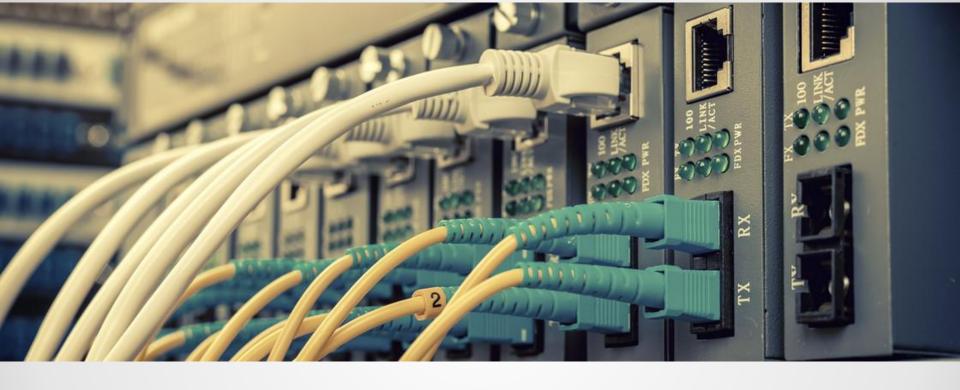

**Elana Broitman Director, New America NYC** 

Pre-normative Measures Lay the Foundation of Trust and Mutual Interest for Formal Agreement

**Technical Cooperation Operationalizes Normative Practices** 

**Measures that are Practical and Tangible Have Long-Term Impact** 

Networking Regional Organizations that Support Confidence Building and Capacity Bridge Countries' Cyber Interests

Capacity Building and Actionable Data Linking Norms to Benefits helps Drive Grass-Roots and Government Support for Cyber Norms Among More Countries.

Sector-Based Incremental Agreements Narrow Ungoverned Spaces; Ultimately Combining for Comprehensive Governance.

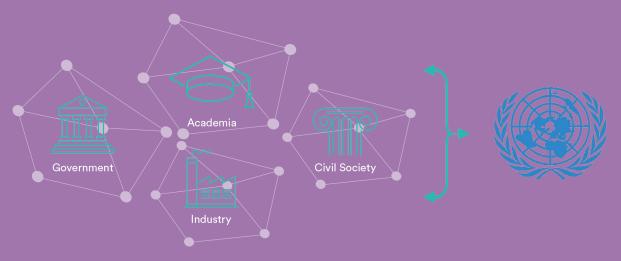

## Useful Ways to Structure a Narrow Cybersecurity Agreement

- Along Thematic Rather than Membership Requirements
- On a Sector Outside of the Security Context
- Leveraging Existing Technical Collaborations and Relationships
- Where the Spillover Benefits or Costs Impact a Number of Different Countries
- Shape the Agreement to Provide a Glide Path for Entry by More Signatories

## Multi-Stakeholder

Civil Society and the Private Sector are Critical Partners for Urging, Supporting, Informing and Implementing Agreements.

Visible, Searchable Databases Minimize Duplicative Work, Reiterate Formed Consensus, and Advance Norm Creation.

- Create and **deepen support** for cyber norms
- Build trust among stakeholders
- Maintain forward momentum
- Narrow ungoverned areas or ones lacking consensus
